## LIQUID FOOD SUPPLEMENT

Natural help for healthy urinary tract

250 ml

Inflammation of the urinary tract is one of the most common bacterial infections. Around 50% of women experience inflammation of the urinary tract at least once in their life.

### Who is particularly prone to development of inflammation of the urinary tract?

Women are more susceptible to urinary inflammations since they have a shorter urethra, which eases the transfer of bacteria into the urinary tract.

Young children, particularly girls, due to improper hygiene of the vaginal area.

Persons with diabetes can have changes in their immune system which makes them more susceptible to urinary inflammations.

Men with enlarged prostate can have a blocked urine flow, which can cause inflammation.

Persons with other problems with the urinary tract (kidney stones, catheters) are more susceptible to inflammation of the urinary tract.

Start of the inflammation is usually abrupt, symptoms may vary from slightly irritating to very painful, and the most common ones are: frequent, unpleasant and urgent need to urinate, stinging sensation, discomfort and pressure sensation while urinating, difficult and painful urination of small amounts of urine, change in the colour and appearance of urine. Bacterial infection which is not treated timely and properly can progress to kidneys and cause a serious infection - pyelonephritis.

Although inflammation of the urinary tract is caused by different types of microorganisms, most common cause is the bacteria Escherichia coli. E.coli is part of the physiological microflora of the lower part of the digestive system and is not considered invasive pathogen until its adhesion to the surface of the mucosa of the bladder via fimbriae, which represents the mechanism of causing an inflammation.

- ⊕ CRANBERRY
- ⊕ D-MANNOSE
- ⊕ COMMON KNOTGRASS
- ⊕ VITAMIN C

*“Synergism of natural substances for immediate relief”*

**URO BALANCE**, liquid food supplement includes an innovative combination of cranberry extract, D-mannose, common knotgrass and vitamin C.

**Cranberry** is a healthy fruit low in calories, which is traditionally used for problems related to urinary tract inflammation. **D-mannose** is a carbohydrate which is naturally present in fruit and vegetables in small quantities, for example in cranberries, blueberries, pears, apples, oranges, legumes, corn, potatoes, cabbage. **Common knotgrass** is an annual herbaceous plant from the family of Polygonaceae which includes 1% of silicic acid, 1% flavonoids and mucoid polysaccharides which are used in traditional purposes as a diuretic (help excrete water through the urinary tract).

Proanthocyanidin A from dry cranberry extract and D-mannose work in synergism and prevent bacterial adhesion to the epithelium of the bladder by taking special binding place on the fimbriae of E.coli, which is specific to it. Common knotgrass helps excrete water through the urinary tract.

**Vitamin C** contributes to normal function of the immune system.

**URO BALANCE INCLUDES INNOVATIVE COMBINATION OF CRANBERRY EXTRACT, D-MANNOSE AND COMMON KNOTGRASS.**

**COMMON KNOTGRASS HELPS EXCRETE WATER THROUGH THE URINARY TRACT.**

**VITAMIN C CONTRIBUTES TO NORMAL FUNCTION OF THE IMMUNE SYSTEM.**

**INSTRUCTIONS FOR USE**  
Take 30 ml once a day.

### INCLUDES IN A RECOMMENDED DAILY DOSE

	30 ML	% *NRV
D-MANNOSE	25 G	-
COMMON KNOTGRASS EXTRACT	100 MG	-
CRANBERRY EXTRACT	100 MG	-
VITAMIN C	80 MG	100

\*NRV = nutrient reference value. - = nutrient reference value is not determined
